

# Amoxgentin<sup>®</sup>

(Amoxicillin/Clavulanate Potassium)

## INDICATIONS

To reduce the development of drug-resistant bacteria and maintain the effectiveness of **Amoxgentin<sup>®</sup> (amoxicillin/clavulanate potassium) and other antibacterial drugs, Amoxgentin<sup>®</sup> should be used only to treat infections that are proven or strongly suspected to be caused by susceptible bacteria.** When culture and susceptibility information are available, they should be considered in selecting or modifying antibacterial therapy. In the absence of such data, local epidemiology and susceptibility patterns may contribute to the empiric selection of therapy. **Amoxgentin<sup>®</sup> is a combination penicillin-class antibacterial and beta-lactamase inhibitor indicated in the treatment of infections due to** susceptible isolates of the designated bacteria in the conditions listed below.

**Amoxgentin<sup>®</sup>** may be taken without regard to meals; however, absorption of clavulanate potassium is enhanced when Amoxgentin<sup>®</sup> is administered at the start of a meal. To minimize the potential for gastrointestinal intolerance, Amoxgentin<sup>®</sup> should be taken at the start of a meal.
