exemestane 25mg tablets 

How BRUMIDEX® CR and tamoxifen work:  
Tamoxifen blocks estrogen from attaching itself to breast cancer cells.

BRUMIDEX® CR (exemestane tablets) has been indicated for advanced breast cancer in post-menopausal women.

#### Indication

BRUMIDEX® CR is a prescription medicine for:

Early breast cancer: BRUMIDEX CR is indicated for the adjuvant treatment (additional treatment given after the primary or main treatment) of postmenopausal women with estrogen-receptor positive (ER positive) early breast cancer. Treatment with BRUMIDEX® CR should begin 2 to 3 years after tamoxifen, at which time tamoxifen should be stopped. Treatment with BRUMIDEX CR should continue for 2 to 3 years until a total of 5 years of adjuvant treatment of tamoxifen and BRUMIDEX CR have been completed.

Advanced breast cancer: BRUMIDEX CR is indicated for the treatment of advanced breast cancer in postmenopausal women whose disease has progressed after tamoxifen therapy.

#### Important Safety Information

Do not take BRUMIDEX CR if you are allergic to BRUMIDEX CR or to anything in it. The active ingredient is exemestane. Do not take BRUMIDEX CR if you are pregnant as it may cause birth defects or miscarriage. Do not take BRUMIDEX CR if you still have menstrual periods. BRUMIDEX CR is only for women who are past menopause.

#### About BRUMIDEX CR (exemestane tablets)

BRUMIDEX CR is a hormonal therapy that is approved for women who:

- Have had estrogen-receptor positive (ER+) early stage breast cancer
- Have gone through menopause
- Have taken tamoxifen for 2 to 3 years

BRUMIDEX® CR is also approved for:

Advanced breast cancer that has come back after treatment with tamoxifen.

#### How BRUMIDEX® CR (exemestane tablets) Works

Hormonal therapy and breast cancer

Some breast cancer cells may need the hormone estrogen to grow. That's why they may be called estrogen-dependent or estrogen-receptor positive (ER+) cancers. BRUMIDEX® CR is a hormonal therapy, meaning it will interfere with the normal production of estrogen. Tamoxifen is another hormonal therapy, but it works differently than BRUMIDEX CR.
