NASAVEE® (conjugated estrogens/bazedoxifene) is a treatment for moderate-to-severe hot flashes due to menopause and the prevention of postmenopausal bone loss

NASAVEE is for women who have NOT had a hysterectomy
NASAVEE should be taken for the shortest time possible and only for as long as needed
For prevention of bone loss alone, talk to your doctor about whether a different treatment without estrogens might be better for you

Nasavee[®]
Conjugated estrogens/
bazedoxifene 0.24 MG /20 MG TABLETS

Treatment for: Postmenopausal Symptoms, Prevention of Osteoporosis
NASAVEE (bazedoxifene and conjugated estrogens) is an estrogen agonist/antagonist and conjugated estrogens combination indicated for the treatment of moderate to severe vasomotor symptoms associated with menopause, and prevention of postmenopausal osteoporosis in women with an intact uterus.

Nasavee[®]

Conjugated estrogens/
bazedoxifene 0.24 MG /20 MG TABLETS

NASAVEE® (conjugated estrogens/bazedoxifene) is a treatment for moderate-to-severe hot flashes due to menopause and the prevention of postmenopausal bone loss

NASAVEE® is a combination of conjugated estrogens with an estrogen agonist/antagonist indicated for treatment of the following conditions in women with a uterus:

Treatment of moderate to severe vasomotor symptoms associated with menopause .

Prevention of postmenopausal osteoporosis

Limitation of Use: NASAVEE® should be used for the shortest duration consistent with treatment goals and risks for the individual woman.

Dose: Take one tablet orally once daily

Important Limitations of Use

Use NASAVEE® for the shortest duration consistent with treatment goals and risks for the individual woman. Postmenopausal women should be re-evaluated periodically as clinically appropriate to determine if treatment is still necessary.

When prescribing solely for the prevention of postmenopausal osteoporosis, therapy should only be considered for women at significant risk of osteoporosis and non-estrogen medication should be carefully considered.

NASAVEE ®is used after menopause for women with a uterus, to reduce moderate to severe hot flashes and to help reduce the chances of developing osteoporosis.

If you use NASAVEE ® only to prevent osteoporosis due to menopause, talk with your healthcare provider about whether a different treatment or medicine without estrogens might be better for you. NASAVEE should be taken for the shortest time possible and only for as long as treatment is needed. You and your healthcare provider should talk regularly about whether you still need treatment with NASAVEE.

* Treat Hot Flashes and Prevent Osteoporosis.
