PROLECTRA is a twice-a-day prescription medicine. Taking one PROLECTRA pill at night and one pill the next morning can help reduce the pain caused by osteoarthritis while helping to avoid some stomach issues common to NSAIDs. Taking twice-daily PROLECTRA.

 **PROLECTRA**[®]
naproxen/esomeprazole magnesium
375/20 & 500/20 mg delayed-release tablets

Treatment for: Osteoarthritis, Rheumatoid Arthritis, Ankylosing Spondylitis, NSAID-Induced Ulcer Prophylaxis
PROLECTRA is a combination of the pain reliever naproxen (NSAID) and esomeprazole magnesium (proton pump inhibitor) indicated for the relief of signs and symptoms of osteoarthritis, rheumatoid arthritis, and ankylosing spondylitis, and to decrease the risk of developing gastric ulcers in patients at risk of developing NSAID-associated gastric ulcers.

 **PROLECTRA**[®]
naproxen/esomeprazole magnesium
375/20 & 500/20 mg delayed-release tablets

PROLECTRA[®] is a medicine which is used in rheumatoid arthritis in patients with a special need for prevention of NSAID-induced gastric and duodenal ulceration, osteoarthritis in patients with a special need for prevention of NSAID-induced gastric and duodenal ulceration and ankylosing spondylitis in patients with a special need for prevention of NSAID-induced gastric and duodenal ulceration. PROLECTRA contains naproxen/esomeprazole magnesium trihydrate.

Approved Uses: PROLECTRA is approved to relieve the signs and symptoms of osteoarthritis, rheumatoid arthritis, and ankylosing spondylitis and to decrease the risk of stomach (gastric) ulcers in patients at risk of developing stomach ulcers from treatment with NSAIDs. PROLECTRA is not recommended as a starting treatment for relief of acute pain. Controlled studies do not extend beyond 6 months.

PROLECTRA can lead to onset of new hypertension or worsening of existing high blood pressure, either of which may contribute to an increased risk of a heart attack or stroke. Speak with your health care provider before starting PROLECTRA if you Have a history of ulcers or bleeding in the stomach or intestines Have heart problems, high blood pressure, or are taking high blood pressure medications Have kidney or liver problems.

If you have osteoarthritis pain, even everyday activities you enjoy can be difficult when your joints are painful or stiff. When it comes to treating osteoarthritis, NSAIDs (nonsteroidal anti-inflammatory drugs) may provide effective pain relief, but these medications may come with a side effect of stomach problems that may impact your ability to continue taking the medication. PROLECTRA ("vi-moh'-voh") is an FDA-approved prescription pain reliever that can also help to avoid some stomach issues common to NSAIDs. PROLECTRA is not recommended as a starting treatment for relief of acute pain. Controlled studies do not extend beyond 6 months. PROLECTRA combines two types of medicines in one pill.

Taking PROLECTRA with low-dose aspirin If you take low-dose aspirin (less than 325 mg/day) for your heart, and also need to take an NSAID, PROLECTRA may be a good option for you and your doctor to consider.

PROLECTRA is one tablet twice daily, 375 mg naproxen/20 mg esomeprazole or 500 mg naproxen/20 mg esomeprazole.

PROLECTRA is used for the relief of symptoms of:

Osteoarthritis.

Rheumatoid arthritis.

Ankylosing spondylitis.

PROLECTRA helps to reduce pain, swelling, redness and heat (inflammation).

The active substances are naproxen and esomeprazole.

Food and Drug Administration (FDA) approved .Prescription Only (POM)
