

**TEFCYTE**<sup>®</sup>  
Valganciclovir Hcl tablets

TEFCYTE<sup>®</sup> (valganciclovir hydrochloride tablets) is **used to treat and prevent infections caused by cytomegalovirus. This infection usually occurs in patients who have suppressed immune systems** such as patients with **AIDS and organ transplant patients.**

TEFCYTE<sup>®</sup> (valganciclovir hydrochloride tablets) may also be used for purposes other than than Aids.

**Indications:**

Ganciclovir is indicated for:

- Sight-threatening **CMV retinitis in severely immunocompromised people**
- CMV pneumonitis in bone marrow transplant recipients
- Prevention of CMV disease in bone marrow and solid organ transplant recipients
- Confirmed **CMV retinitis in people with AIDS (intravitreal implant)**
- It is also used for acute CMV colitis in HIV/AIDS and CMV pneumonitis in immunosuppressed patients.

TEFCYTE<sup>®</sup> has also been used with some success in **treating Human herpesvirus 6 infections.**

TEFCYTE<sup>®</sup> has also been found to be an effective treatment for herpes simplex virus epithelial keratitis.
