

Walupress[®]
(Dothiepin Hydrochloride) Tablet/Capsule

Walupress[®]
(Dothiepin Hydrochloride) Tablet/Capsule

This medication is an antidepressant, prescribed for depression.

Walupress[®] (Dothiepin Hydrochloride) Tablet/Capsule is used to treat depression. It belongs to a group of medicines called tricyclic antidepressants. Depression is longer lasting and/or more severe than the 'low moods' that everyone has from time to time due to the stress of everyday life. It is thought to be caused by a chemical imbalance in parts of the brain. This imbalance affects your whole body and can cause emotional and physical symptoms such as loss of interest in activities, being unable to enjoy life, disturbed sleep, often waking up early, poor appetite or overeating, loss of sex drive, lack of energy and feeling guilty over nothing.

Walupress[®] (Dothiepin Hydrochloride) Tablet/Capsule corrects this chemical imbalance and may help relieve the symptoms of depression.

Your doctor, however, may prescribe Walupress[®] (Dothiepin Hydrochloride) Tablet/Capsule for a purpose that is not listed above. Ask your doctor if you have any questions about why Walupress[®] (Dothiepin Hydrochloride) Tablet/Capsule has been prescribed for you.

Walupress[®] (Dothiepin Hydrochloride) Tablet/Capsule is only available with a doctor's prescription.
